Attention: Edward Elder

Subject: Acceptance Test Procedure 140-T001-000, Rev. -  
Northrop Grumman drawing 561R902, Device H01, Rev. A

Mr. Elder,

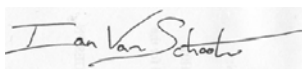

Northrop Grumman Engineering has reviewed the subject Acceptance Test Procedure. This letter is to advise you that the acceptance testing procedure is conditionally approved with the following modifications to be made in a redrafting of the document:

- A section should be added to indicate that all parts will be screened in accordance with 561R902 Table II prior to acceptance testing and that screening results will be available to Northrop Grumman for inspection.
- Electrical testing should be performed at -20°C and +85°C in addition to +25°C (see 561R902 Table III)
- Sheet 4, Paragraph 4.2.1, Detection Thresholds, the reference should include the word "SCD."
- It is preferred that the Northrop Grumman drawing number and revision level be indicated on the cover sheet of the Acceptance Test Procedure.

Please retain this approval letter with the ATP. Any changes to the ATP must be submitted for approval on a Vendor Engineering Change Request (VECR).

The ATP document does not relieve the manufacturer in any way of the requirements of the individual specification drawing.

Sincerely,

---

Component Engineering
