

Counterfeit Parts Prevention Statement

Paktron understands the worldwide concern about counterfeit components within the supply chain. This statement outlines Paktron's position regarding the prevention of counterfeit parts in its supply chain and subsequent production process.

Paktron is committed to providing quality products and procuring its components from the original component manufacturer (OCM) or the original component manufacturer's authorized suppliers.

Paktron maintains a listing of approved suppliers within its system. Purchasing is restricted to procuring raw materials and components from approved OCM in the Paktron business system, thereby preventing purchases from sources other than authorized manufacturers and suppliers. Paktron does not purchase products that are refurbished.

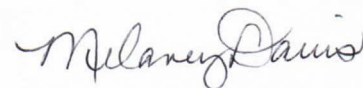

Our sources are continually monitored for their order history information relative to quality, performance, and service.

We must be diligent in tracking, inspecting, and managing our components and materials to ensure their authenticity is not compromised. We are committed to ensuring counterfeit materials are appropriately reported and preventing, removing, and mitigating fraudulent and suspect materials from entering the supply chain. Paktron continually strives to improve its processes while challenging its supply chain to meet the same standards.

By managing the risk of counterfeit parts entering our products, we will live up to our brand promise of delivering parts for mission-critical applications.
